ETSA02-ADM-LAB1

Lab 1

Getting started  
with Robocode

Version 0.1 approved

Prepared by Markus Borg  
Dept. of Computer Science, Lund University

February 3, 2018

## Revision History

Name	Date	Reason For Changes	Version
Markus Borg	2017-12-08	Initial draft.	0.1
Markus Borg	2017-12-09	Lab scope completed and tested.	0.2

# 1 Introduction

Learn to install and configure a non-trivial software framework by following instructions. Learn the basics of Robocode. Use Eclipse to build a basic robot. Configure Robocode to import new robot. Understand the basics of teams in Robocode.

## 2 Before the lab

Read up on the basics of Robocode. Read the chapters of the “Beginner Guides” – you can skip the last three.

[http://robowiki.net/wiki/Robocode\\_Documentation](http://robowiki.net/wiki/Robocode_Documentation)

Have a quick look at the API to get a general feeling of what all is about:

<http://robocode.sourceforge.net/docs/robocode/>

## 3 At the lab

### 3.1 Install Robocode

Download latest Robocode: <https://sourceforge.net/projects/robocode/files/>

Install on local drive

Start a few battles. Experiment.

Develop a quick robot using the internal editor: [http://robowiki.net/wiki/Robocode/My\\_First\\_Robot](http://robowiki.net/wiki/Robocode/My_First_Robot)

Compile it and try it in battles.

### 3.2 Develop a Robot in Eclipse

Create a project in Eclipse [http://robowiki.net/wiki/Robocode/Eclipse/Create\\_a\\_Project](http://robowiki.net/wiki/Robocode/Eclipse/Create_a_Project)

Download the Basic Leader Bot to the project. Make sure it builds.

### 3.3 Try the robot in Robocode

Add the Robot project in Robocode: [http://robowiki.net/wiki/Robocode/Add\\_a\\_Robot\\_Project](http://robowiki.net/wiki/Robocode/Add_a_Robot_Project)

Note: Add the path to the Eclipse project (with /src and /bin as sub-folders), not the workspace.

### 3.4 Configure Eclipse to run and debug the robot

Run from Eclipse: [http://robowiki.net/wiki/Robocode/Eclipse/Running\\_from\\_Eclipse](http://robowiki.net/wiki/Robocode/Eclipse/Running_from_Eclipse)

Set up debugging from Eclipse: [http://robowiki.net/wiki/Robocode/Eclipse/Debugging\\_Robot](http://robowiki.net/wiki/Robocode/Eclipse/Debugging_Robot)

### 3.5 Expand the team

Repeat the instructions in Sections [3.2-3.5](#) for the Basic Bot and the Basic Drone.

Create a team from within Robocode (Robot->Create a robot team)

Try a few team battles against various opposition.

## 4 After the lab

Reflect on what is important for successful team battles. Consider your two perspectives. First, think about what type of team you want to build to be run a successful LU rumble.

Second, discuss what type of Robot you want to release on the market. What types will be in high demand? What is the competition going to offer? What could be your niche? Think about commodity, differentiation, and innovation.

Successful development of software products for an open market requires making critical decisions under time pressure – decisions of both technical nature as well as business nature. Your team needs to decide soon!
